The three power point presentations follow one after the other in this slide deck.
LIFE AFTER “THE BIG DEAL”
An Examination of Methods and Usage in the Wake of Cancellation of a Comprehensive eJournal Package
Economic downturn saw 40% decrease in state funding

Wiley “Big Deal” provided access to over 1800 titles at a cost of nearly $250,000

Reduced the number of subscribed titles to 76 “core titles” and supplemented the “Article Select Tokens”
METHODS

- Current and historical usage statistics were consulted to identify top journals and trends in usage patterns.

- Article Select Token price is $11.50 per article, so the cost per use threshold for journal subscription retained was <$11.50 per use (unless special circumstances dictated otherwise).

- We identified a group of 76 core journals that met this criteria and cancelled access to >1700 titles. We did retain ownership to the content for 1997-2010.
• The publisher neglected to turn off access to titles until April 2011.
• Tokens were purchased in batches of 1500 for best value ($11.50 per token).
• Library opted for mediated use.
Wiley Journal Usage
Before and After

![Bar chart showing Wiley Journal Usage from 2012 to 2015. The chart compares usage in 'Core Titles' and 'Other Titles' across these years.]
Wiley Journal Cost
Before and After

Big Deal Spending (actual and projected)
Actual Spending
1500 appears to be almost always the correct amount of tokens.

We have added only 1 title due to faculty request (she was on the editorial board), though we frequently receive requests for Wiley-Blackwell titles.

Since 2011, 2 titles have been added due to excessive token use.
RESULTS

- 2015: Not use more than 30 tokens on any one journal. Exactly 400 journals had at least one token use.
- Big Deal cancellation could be irrevocable
- Replicating these results with other publishers may not be possible
Designing a Library Resource Module for an Interprofessional Curriculum
Elizabeth G. Hinton, MSIS, AHIP & Susan B. Clark, MLn
University of Mississippi Medical Center

Background
The University of Mississippi Medical Center piloted an interprofessional education course in Fall 2015 titled "Foundations of Interprofessional Education: Building Bridges." The course culminated in a half-day clinical and field disaster simulation that emphasized communication, teamwork, roles, and ethics. Prior to the event, Rowland Medical Library created an online Canvas module to familiarize students with and promote the importance of using evidence-based resources in an interprofessional healthcare setting.

IPE Course Objective:
"This longitudinal IPE program is designed to provide a mechanism for development of core competencies for interprofessional education across the Medical Center campus and to promote team-based education that would ultimately provide cost-effective, evidence-based, quality healthcare for patients, families, and the communities."

Participants
Nursing  Medicine  Allied Health
Dentistry  Pharmacy  Graduate Studies

"I did not consider some of the cases in class my peers noticed... to come up with the best treatment plan for the patient."
- Graduate Student

"Each one is a resource for the other (in evidence-based medicine)."
- Pharmacy Student

Methods
Librarians selected two relevant case study scenarios from AccessMedicine and provided descriptions of four resources: UpToDate, DynaMed, VisualDX and TOXNET. Students were asked to select a case study and document which resource they would use in the different scenarios and why. Students were also directed to comment on a resource that an interprofessional peer selected.

Results
- 30 students participated in the module
- 30 students posted comments to a peer’s selection
- 90% of the comments were “interprofessional”
- 9 students completed the module assessment

Successes & Challenges
- 100% of the students who completed the assessment were satisfied with the module.
- 51 students were enrolled in the IP course, and over half participated in the module. This was a respectable number when compared to the non-library modules.
- The online nature of the course may have caused confusion over the module instructions, because most students did not respond to another student’s post.
- The assessment could have been administered more effectively.
Roll with the Times, or the Times Roll Over You

Charleston Conference 2016
Rolling with a Purpose--16th Health Sciences Lively Lunch
Alexander Street
Taney Shondel & David Parker
Agenda

- Brief background
- Topics to discuss
- What Alexander Street is doing now
- Where are we headed?
TOPICS

- Streaming medical and health science videos: unique challenges and opportunities
- Why is currency important? How do we manage it?
- Who, if anyone is archiving this content?

An Overview

The Health Insurance Portability and Accountability Act (HIPAA) of 1996 began a series of complex and wide-ranging changes to the practice of healthcare in America. Significant revisions have been made over the years, particularly in 2009 with the addition of the Health Information Technology for Economic and...

The Security Rule

The need for attention to data security came about largely because of past abuses that occurred in many places in healthcare. While regulations associated with the Security Rule have been part of the Health Insurance Portability and Accountability Act (HIPAA) since it was enacted in 1996, they were modified...
