It’s Showtime: Make it Count

Sharon Bolan, Lunenburg County Schools
How does the script look?

Say: “Okay class, we are going to watch a very short clip this morning and I want you to be able to tell me a couple of things. First, be able to tell me a description of a cell and secondly, what are three things that all cells have in common. Ready?” Start Biology: Cell Structure at beginning and Stop video at 0:34.

Say: “Did you catch it? What are cells? (Smallest living units of an organism) What three things do all cells have in common? (cell membrane, cytoplasm, DNA) Awesome job!”
Try it again

Say, “Students, we are going to watch a short video clip about Frederick Douglass. There are two pieces of information I’d like you discuss when it stops. First, I’d like you to tell me where Douglass was born and secondly, I’d like you tell me when Douglass first realized that he was a slave.” START Frederick Douglass at 1:15 and STOP at 2:45

Say, “Okay, where was Frederick Douglass born? *(Talbot County, Maryland)* At that time, the narrator says that Douglass was little kid living near a river, but he realized that he was a slave at a very young age. What happened? *(Accept answers)*
