  - Check the box in the upper left-hand corner of the question

  ![Selected Response](image)

  Copper compounds are used in large amounts to control the growth of algae and other aquatic plants. Copper interferes with photosynthesis in these organisms. What would be the most likely result of an accidental spill of these compounds in an aquatic environment?

  A. The fish would grow larger than usual.
  B. The zooplankton population would increase.
  C. The plants would increase in size but decrease in number.
  D. The plant populations would be reduced.

  ![Summary Format](image)

  - A summary of the question will appear at the left in list format

  - Continue selecting questions to be added to the test.
Adding Test Bank Questions to a Test

- **Note:** Questions will be added to a test in the order in which they were selected.
- To reorder the questions, use the arrows to the left of the question summaries.

To remove a question from the test, click the X to the right of the question summary.

After completing the question selection process, click the **Add to Test** button.
