Internet governance (IG) has become one of the most important policy issues of our time. Topics like privacy protection, human rights online, and cybersecurity are increasingly in the focus of global policy-making. How we manage the Internet will define much of our society. Yet the growing relevance of the Internet is not yet supported by effective and inclusive IG.

The Advanced Diploma in Internet Governance gives current and future Internet policy makers a solid foundation in diplomatic skills and techniques necessary to engage effectively in international global policy processes. To obtain the diploma, participants must successfully complete three of DiploFoundation’s online IG courses within a two-year period. The courses currently on offer are:

- Introduction to Internet Governance
- Internet Technology and Policy: Challenges and Solutions
- Cybersecurity
- E-Diplomacy

As a mid-level diplomat exposed mainly to traditional diplomatic concerns, the program provided comprehensive working knowledge on the technical and policy aspects of the international governance of the Internet. The courses provided an overview of Internet Governance, probed the challenges and opportunities faced by diplomatic actors in the Internet Age, and comprehensively tackled the main online technologies and their nexus with key Internet principles. I was particularly impressed with the in-depth knowledge and diverse backgrounds of the lecturers and my classmates. The online discussions were stimulating and cutting-edge.

Ryan Francis D. Gener, Director, Visa Division, Office of Consular Affairs
Department of Foreign Affairs, Republic of the Philippines

Who should apply?

- Officials in government ministries, departments, regulatory bodies, or institutions dealing with Information Society, Internet, and ICT-related policy issues (e.g. telecommunications, education, foreign affairs, justice)
- Postgraduate students, academics, and researchers in the IG field (telecommunications, electrical engineering, law, economics, diplomacy, international relations, development studies)
- Civil society activists in the IG and Information Society fields
- Journalists covering IG issues
- Individuals in Internet business-related fields (e.g. ISPs, software developers).
