Introductions were made – several Cancer specific hospitals.

What to use to help create consumer health collection?

- CAPHIS, the Consumer and Patient Health Information Section of the Medical Library Association
  http://www.mlanet.org/caphis
  Site has a list but it is several years old, some of the content is archived versus on the main part of the site. https://nnlm.gov/mar/guides/consumer-health

- Would be nice if there was a Doody’s list for consumer health

- Use online resources such as Amazon, etc to find resources. Depends on demand as well if specialized.

Some consumer health locations check out books and some do not.
Most popular book at the Cancer consumer health library is Cancer-Fighting Kitchen by Katz

Natural Medicines Comprehensive Database is useful for looking up supplements.
http://naturaldatabase.therapeuticresearch.com/

Natural Medicines - Therapeutic Research Center
https://naturalmedicines.therapeuticresearch.com/

Search About Herbs - Memorial Sloan Kettering Cancer Center

Discussion about Cancer Librarianship Group – lots of good information on their site without being a member. 
http://www.mlanet.org/page/section-landing-cancer-librarians-section

Discussion of Health Literacy vs Health Understanding – try to rethink how we label it.

http://ethnomed.org/ - this is geared to medical staff to help provide handouts on a variety of health topics in 10 refugee languages
EthnoMed is Harborview Medical Center's ethnic medicine website containing medical and cultural information about immigrant and refugee groups. Information is specific to groups in the Seattle area, but much of the cultural and health information is of interest and applicable in other geographic areas. EthnoMed is a joint program of the University of Washington Health Sciences Libraries and Harborview Medical Center’s Interpreter Services Department/Community House Calls Program (ISD/CHC). EthnoMed is directed by clinical faculty in the Department of General Internal Medicine's Refugee and Immigrant Health Promotion Program at Harborview, and maintains roots in the Pediatrics Department and strong connections in the International Medicine Clinic. The EthnoMed team works with caseworker cultural mediators, medical interpreters, health care providers and ethnic community leaders who serve as authors and advisers of the web content.

https://healthreach.nlm.nih.gov/
A national collaborative partnership that created a resource of quality multilingual, multicultural public health information for those working with or providing care to individuals with limited English proficiency. HealthReach grew out of the Refugee Health Information Network (RHIN) when it became apparent that the information resources in the database are useful to all new Americans and those who have limited English proficiency. Resources include:

- health education materials in various languages and formats (brochures, fact sheets, videos)
- provider tools (including best practices, cultural information, and effective use of interpreters)
- special collections on Emergency and Disaster, Women’s Health and Mental Health
