Navigating Differential Diagnosis: The Value of Visualization

“Nearly every person will experience a diagnostic error in their lifetime.”
- Institute of Medicine, 2015

VisualDx was developed to assist clinicians in medical decision-making by providing peer-reviewed evidence-based information at the point of care. Moreover, the tool is designed to think and work like a clinician in practice. VisualDx combines a diagnostic framework with visualization of disease. This presentation will educate you on how VisualDx can be used by librarians to support clinicians, enhance the workflow, and ultimately improve patient outcomes.

Tuesday, January 23
7:30am- 8:00am
Chaparral Conference Center
