Go to “Get Ready for College Placement Tests” & choose any math Accuplacer on the list to peruse & discuss in your group how these materials are useful.

-Answer in Padlet: Identify student groups with whom this material might be useful, and note one way the material might be useful with non-college/DC students.
Below the Accuplacer practice tests is an E-book. Download it and peruse it with your group.

-Answer in Padlet: There are plenty of practice questions, but the book has many instructional/explanatory pages. Analyze the pages for quality- could your students use these materials independently/would some facilitation be needed? Can you describe how you might use this?

Nimitz library: putting "people work" before paper-work.
Go to “Get ready for the SAT test.” Choose step 5, focus on math. Try out the tutorial.

-Answer in Padlet: How user friendly is the tutorial? What are the best qualities about this tutorial? Are there any drawbacks/things you would change/improve about it?
Under “Prepare for College” choose “Get Ready for the ACT test.” On that screen, choose the Science Flashcards option on the right. Choose either deck and play with the flashcards until you get a good feel for how they work. Then start flipping through the cards and look at plenty of terms found in the cards.

-Answer in Padlet: What are some nifty qualities you’ve noticed about how the cards work? List some terms you found in the decks that you would want your students to know.
Go “home” and choose “Prepare for College” again, then go to the drop down for “Get Ready for AP Tests.” Within the AP materials is a wealth of science information. Look for a subject you might potentially teach, but not necessarily at the AP level. Search for tools you believe would be useful for students in both AP AND regular level classes. If you find some, list them in Padlet.

You are going to “Computer Skills Center” instead of “Prepare for college.” Start with the “Popular Software Tools.” Browse through and discuss what is there as a group.

-Answer in Padlet: Which lessons here are appropriate for our students, and at which grade levels? -Are there materials here that you would really not bother with? Why? -Does Aldine have tools like Visio and SharePoint Designer available to students, and if so, at which campuses?

Back up to “Computer Skills Center.” Browse what else is there: Get Started…, Graphics and Illustration, etc.

-Answer in Padlet: Are there additional tools here that are useful? List any that you think would be valuable tutorials for students and adults alike.
