  - Give the board and community a positive story and branding for efficiency

New Jersey school districts face serious challenges. Maintaining and improving education standards with a constrained budget is a common issue. Staff, educational programs, and extracurricular activities have all faced cuts – but why not cut energy expenses? Energy and operational costs can be significantly reduced through an Energy Savings Improvement Program (ESIP). With ESIP, facility improvement goals can be achieved with no added cost – by reallocating money within the existing budget. Regulated through the New Jersey Board of Public Utilities, ESIPs do not require new bonding and requires a budget neutral program.

Additionally, there are numerous energy program incentives that are available to all public entities that choose to utilize ESIP. This presents you with the opportunity to complete the work that your facilities have needed for years. Whether your focus is maximizing funding, updating technology, hiring much needed additional staff, or replacing aging equipment – your district’s vision is important.

Without Schneider Electric
School district must manage conflicting interests amongst a wide variety of contractors and products. No one is accountable for the end result.

With Schneider Electric’s Turn-Key Solution
We are solely responsible for the planning, implementation and on-going measurement to ensure the success of your ESIP.

**Our Process**
